SEASONALLY ADJUSTED INDICATORS

In most instances, the aim in compiling monthly or quarterly economic time series is to provide evidence of movement, in order to indicate the effects changing conditions are having on the activities being measured — and, in so doing, to signal what might be likely to occur in the near future. Seasonal adjustment is a technique designed to assist in these processes of analysis and interpretation by removing the estimated effects of normal seasonal variation from statistical series, so that the effects of other influences on the series may be more clearly recognised.

Details of the methods used in deriving the seasonally adjusted figures shown in this publication are given in the publication *Seasonally Adjusted Indicators* (1308.0), last issued in 1983 by the Central Office of the ABS.

Seasonally adjusted statistics are revised following revision to the original data and as additional data are brought into the analysis each year.

For series where one of the components and the total of the components have been seasonally adjusted (e.g. private dwellings and total dwellings), any figures derived by deduction (in the example quoted — government dwellings) do not amount to a formally seasonally adjusted series for the balance of the components.

(a) Statistics in this table relate to vital events which occurred in each quarter and year shown, and are registered up to the release of this publication. Because of late registrations, they are likely to be revised, particularly the most recent periods.

(b) Births and deaths statistics relate to events which occurred in Australia where the usual residence was within NSW.

(c) Deaths under one year of age.

(d) Number per 1 000 of estimated resident population at 30 June, or number of infant deaths per 1 000 live births.

(a) Full-time employees are permanent, temporary and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and received pay for any part of the reference period. If agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 35 hours or more per week.

(b) Part-time employees are permanent, temporary and casual employees who are not full-time employees as previously defined.

NOTE: The tables on pages 12 and 13 contain estimates derived from the Survey of Employment and Earnings, an Australia-wide employer-based survey. Explanatory notes are contained in *Employed Wage and Salary Earners, Australia* (6248.0), which is issued quarterly and is available from the Sydney Office of the ABS. Estimates derived from the Survey of Employment and Earnings will differ from labour force estimates derived from the Monthly Population Survey for the reasons set out in the Information Paper *Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0).

(a) Overtime is time worked in excess of award, standard or agreed hours of work for which payment is received. Overtime hours represent the number of hours of overtime paid for.

(b) The figures shown are based on the last pay period ending on or before the third Friday of the month shown.

(c) Calculated by dividing total overtime hours paid for in each group by the total number of employees in the same group.

(d) Calculated by dividing total overtime hours paid for by the number of employees who were paid for overtime.

(e) The number of employees who were paid for overtime as a percentage of the total number of employees.

(a) Working days lost refer to days lost by:

- (i) employees who were directly involved in the dispute, and
- (ii) employees who worked in establishments where stoppages occurred but were not themselves parties to the disputes; excluded is the time lost, as a result of the disputes, by employees in other establishments.

(b) Relates to industrial disputes involving a stoppage of work for a

minimum of 10 working days, regardless of the length of the stoppage, for example, 80 employees on strike for one hour. Disputes are classified by industry according to the Australian and New Zealand Standard Industrial Classification (ANZSIC). Disputes prior to January 1994 are classified by industry according to the Australian Standard Industrial Classification (ASIC).

(a) These are gross contents of metallic minerals produced, as determined by assay, and make no allowance for losses in smelting and refining. The quantities shown are therefore, in general, greater than those actually recoverable

(b) Includes the metallic contents (when finally separated) of zircon-rutile

concentrates recovered in NSW and finally separated in Queensland. Excludes the metallic contents of zircon-rutile concentrates recovered in Queensland or imported into Australia and finally separated in NSW.

(c) Content of fine metal.
